Allowable Subject Matter

The following is an examiner's statement of reasons for allowance:

Claims 1-15 are allowed because the prior art fails to teach and/or disclose a process for producing 1-acetoxy-3- (substituted phenyl) propene in the presence of a catalyst consisting essentially of at least one compound selected from the group consisting of (a) halogenated boron compounds (b) triflate compounds of Group 11 elements of the Periodic Table (c) halogenated compounds of Group 12 elements of the Periodic Table and (d) triflate compounds and halogenated compounds of tin and lanthanoid elements of atomic numbers 58 and 66 to 71.

The closest prior art, by Scriadine (Bull. Soc. Chim de France, Section 6, June 1961 pp.1194-1198), teaches a new method for preparation of dihydrocinnamaldehydes. Scriadine teaches the preparation of the instant products wherein; he uses titanium tetrachloride and boron fluoride or its complexes. However, the process fails to teach the use of (b) triflate compounds of Group 11 elements of the periodic table, (c) halogenated compounds of Group 12 elements of the Periodic Table and (d) triflate compounds and halogenated compounds of tin and lanthanoid elements of atomic numbers 58 and 66 to 71 which are the key components of the instant invention.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should
